

# HTML Pages

✓ Published

 Edit

In this second checkpoint, you are required to prepare 3 main web pages of your project using HTML and CSS. It would be awesome if you could learn and use [Bootstrap](https://www.w3schools.com/bootstrap4/)  (<https://www.w3schools.com/bootstrap4/>) or other CSS frameworks to construct your pages.

Rubrics:

Criterion	Excellent (Full Credit)	Good (70% pts)
Coding Validation 40 %	No errors in HTML or other coding as found by me or an online validator.	More than 10 coding errors on the site as found by me or an online validator.
Layout/Design 40 %	<ul style="list-style-type: none"><li>- The website has an attractive and usable layout.</li><li>- It is easy to locate all important elements related to the main functionality of the website.</li></ul>	<ul style="list-style-type: none"><li>- The website has a usable layout, but may appear busy or boring.</li><li>- It is hard to locate the important elements.</li></ul>
Style Consistency 20 %	You use a style sheet to define attributes (along with some inline style), which makes all pages attractive looking and consistent.	You use a style sheet, however, it is not consistent on all pages, which disrupts the consistency of pages within the website.

Deliverable:

1. HTML/CSS/image files. Please include all HTML-related files in a zip file and upload it to Canvas.
2. Report: Please describe your user interface design on one page, with additional pages for screenshots of the resulting web pages. The report should be uploaded as a separate PDF file.

**Points** 5

**Submitting** a file upload
